

A typical scenario is that the IT administrator creates a macOS script file that configures specific ClickShare parameters.

The table below lists the supported parameters that can be used when deploying the ClickShare Desktop App (PKG) file on macOS devices (how-to, see [KB 13167](#)).

Supported parameters:

Parameter	Accepted values	Description	Available in
ACCEPT_EULA	YES	Mandatory parameter	v4.40+
BETA_PROGRAM	YES, NO	Optional parameter Default value: YES To control the “Beta Program” UI option NO : NO UI option for Beta Program in the app	v4.40+
PRODUCT_USAGE_ANALYTICS	YES, NO	Optional parameter Default value: YES To turn on and off “Usage Statistics” BETA_PROGRAM will be NO when PRODUCT_USAGE_ANALYTICS is set to NO	v4.40+
DEFAULT_UI	MINI, LARGE	Optional parameter Default value: Not Set To decide the UI style of the app MINI : The UI style is Mini and the users can not switch to the Large UI style LARGE : The UI style is Large and the users can switch to the Mini/Large UI style Not Set : The UI style is the last setting or Mini and the users can switch to Mini/Large UI style.	v4.40+
AUTO_UPDATE	YES, NO	Optional parameter Default value: YES To control if the app will be automatically updated or not	v4.40+

Script examples:

```
# Disable usage analytics
defaults write /Library/Preferences/com.barco.clickshare.plist PRODUCT_USAGE_ANALYTICS -string "NO"

# Installation with disabling Beta Program
defaults write /Library/Preferences/com.barco.clickshare.plist BETA_PROGRAM -string "NO"

# Installation with Mini UI
defaults write /Library/Preferences/com.barco.clickshare.plist DEFAULT_UI -string "MINI"
```

```
# Installation with disabling Auto Update
```

```
defaults write /Library/Preferences/com.barco.clickshare.plist AUTO_UPDATE -string "NO"
```

Info! If you see api.amplitude.com being rejected by your firewall or proxy, this is the statistics engine of the client attempting to upload anonymous usage information. It can be disabled individually per client or system-wide with the **PRODUCT_USAGE_ANALYTICS=NO** switch. The installed client may need to be deleted from the system(s) before installing the App again.
