

The ClickShare Desktop App is designed to be installed on the computer by the user through the EXE release of the installer. As this installation does not require administrator privileges and the App will update itself, this is the advised, low maintenance deployment option.

If a more controlled deployment is required, organizations using Microsoft System Center Configuration Manager (SCCM), can deploy the MSI version of the installer.

This article describes how to deploy and remove the ClickShare Desktop App MSI with Microsoft SCCM from an organization's Windows computers.

- [Create Application flow for installation](#)
- [Create Application flow for uninstallation](#)

Downloading the ClickShare Desktop App MSI package

The MSI package of the ClickShare App installer can be downloaded from the www.clickshare.app.

It fully supports msixexec.exe commands and can as such be used by SCCM.

Creating the ClickShare Desktop App deployment package in SCCM

You can use the **Create Application** function to create a package based on the ClickShare_Installer.msi file which SCCM can deploy to a group of computers to install or remove the ClickShare Desktop App.

■ Create Application flow for installation

1. Browse to the ClickShare_Installer.msi which should be on a shared folder that can be accessed by the SCCM server and click **Next**.

Application information successfully imported from the Windows Installer (*.msi file) file.

Details:

Application name: ClickShare Machine-Wide Installer

Publisher: Barco

Software version: 1.0.0.0

Deployment type name: ClickShare Machine-Wide Installer - Windows Installer (*.msi file)

Product Code: {93C1B073-54D8-410F-B8DA-0C2D4FC70DD6}

Installation behavior: Install for system

Content location: \\ecom\tools\

Number of files: 1

Content files: ClickShare_Installer.msi

To modify any details from the imported information, click Next. To exit this wizard without creating the application, click Cancel.

< Previous Next > Summary Cancel

3. Specify the information about this application:

Name: ClickShare Machine-Wide Installer

Publisher: Barco N.V.

Software version: x.x.x.x (ClickShare firmware version)

Installation program: msiexec.exe /i "ClickShare_Installer.msi" /qn ACCEPT_EULA=YES

The screenshot shows the 'Create Application Wizard' window with the 'General Information' tab selected. The window title is 'Create Application Wizard'. On the left, there is a navigation pane with 'General Information' highlighted. The main area is titled 'Specify information about this application'. It contains several input fields: 'Name' (ClickShare Machine-Wide Installer), 'Administrator comments' (empty), 'Publisher' (Barco N.V.), 'Software version' (4.4.0.3), 'Optional reference' (empty), and 'Administrative categories' (empty with a 'Select...' button). Below these, there is a section titled 'Specify the installation program for this application and the required installation rights.' It includes an 'Installation program' field containing the command 'msiexec /i "ClickShare_Installer.msi" /qn ACCEPT_EULA=YES' and a 'Browse...' button. There is also a checkbox for 'Run installation program as 32-bit process on 64-bit clients.' and an 'Install behavior' dropdown menu set to 'Install for system'. At the bottom, there are four buttons: '< Previous', 'Next >', 'Summary', and 'Cancel'.

4. Click **Next**.

[Optional] Click **Summary** to review the entered information.

5. Create Application wizard completed successfully.

Info!

Once deployed, the ClickShare Desktop App will update itself automatically. It is not advised to use SCCM to deploy

upgrades.

If auto-updating is not an option within your organization, you should uninstall the deployed version before installing the newer version.

Additionally, it is advised to disable the auto-updating by blocking access to the ClickShare update-server at <https://assets.cloud.barco.com/clickshare/release/RELEASES>

By blocking this URL on the network or client firewall, the ClickShare Desktop App will not be able to auto-update anymore.
